

ACCOMODATING OVERSIZED TRUCK TIRES

Although the Tru-Line TL series alignment system is designed to align vehicles with rim diameters up to 20", alignment of vehicles with larger rim and tire diameters is possible. You can offset the center assembly of the TL-28 Wheel Clamp to accommodate the laser to reach around the oversize tire as seen in the diagram below.

The Runout will still need to be performed in the same fashion spelled out in the Runout Procedure section.

Caster, Camber, and SAI are all performed in same fashion in the according sections.

One Size Wheel Configuration
